

1. In this course we will study statistical methods and data analysis for design of experiments, using SAS software.
2. The mathematics prerequisite for this course is high school algebra.
3. It is expected that the students will spend about 10 hours per week, every week, for this course.
4. Homework is mandatory and is due on Tuesday, a week after it is assigned. It has to be uploaded to Husky CT cite for this course by Wednesday 5 pm. Late homework assignments are not going to get credit.
5. The two exams are going to be take-home exams, open book and notes, as scheduled. A scientific calculator will be needed. The exams will be posted on Husky CT. The solutions to the exams have to be uploaded to Husky CT by the specified time on the course syllabus (about 24 hours after they are posted).
6. The grade for this course will be based on:

Exam 1	40%
Exam 2	40%
Homework	20% (based on the highest grades of 10 homework assignments)
