<b>Preface</b>	<b>vii</b>
<b>1 Introduction</b>	<b>1</b>
1.1 Aims . . . . .	1
1.2 Outline . . . . .	2
1.3 Motivating Examples . . . . .	3
1.4 Survival Analysis . . . . .	13
1.4.1 Proportional Hazards Models . . . . .	15
1.4.2 Censoring . . . . .	15
1.4.3 Partial Likelihood . . . . .	16
1.5 The Bayesian Paradigm . . . . .	17
1.6 Sampling from the Posterior Distribution . . . . .	18
1.7 Informative Prior Elicitation . . . . .	22
1.8 Why Bayes? . . . . .	26
Exercises . . . . .	27
<b>2 Parametric Models</b>	<b>30</b>
2.1 Exponential Model . . . . .	30
2.2 Weibull Model . . . . .	35
2.3 Extreme Value Model . . . . .	37
2.4 Log-Normal Model . . . . .	39
2.5 Gamma Model . . . . .	40
Exercises . . . . .	42

<b>3 Semiparametric Models</b>	<b>47</b>
3.1 Piecewise Constant Hazard Model . . . . .	47
3.2 Models Using a Gamma Process . . . . .	50
3.2.1 Gamma Process on Cumulative Hazard . . . . .	50
3.2.2 Gamma Process with Grouped-Data Likelihood .	51
3.2.3 Relationship to Partial Likelihood . . . . .	53
3.2.4 Gamma Process on Baseline Hazard . . . . .	55
3.3 Prior Elicitation . . . . .	56
3.3.1 Approximation of the Prior . . . . .	57
3.3.2 Choices of Hyperparameters . . . . .	59
3.3.3 Sampling from the Joint Posterior Distribution of $(\beta, \delta, a_0)$ . . . . .	60
3.4 A Generalization of the Cox Model . . . . .	63
3.5 Beta Process Models . . . . .	66
3.5.1 Beta Process Priors . . . . .	66
3.5.2 Interval Censored Data . . . . .	71
3.6 Correlated Gamma Processes . . . . .	72
3.7 Dirichlet Process Models . . . . .	78
3.7.1 Dirichlet Process Prior . . . . .	78
3.7.2 Dirichlet Process in Survival Analysis . . . . .	81
3.7.3 Dirichlet Process with Doubly Censored Data .	84
3.7.4 Mixtures of Dirichlet Process Models . . . . .	87
3.7.5 Conjugate MDP Models . . . . .	89
3.7.6 Nonconjugate MDP Models . . . . .	90
3.7.7 MDP Priors with Censored Data . . . . .	91
3.7.8 Inclusion of Covariates . . . . .	94
Exercises . . . . .	94
<b>4 Frailty Models</b>	<b>100</b>
4.1 Proportional Hazards Model with Frailty . . . . .	101
4.1.1 Weibull Model with Gamma Frailties . . . . .	102
4.1.2 Gamma Process Prior for $H_0(t)$ . . . . .	104
4.1.3 Piecewise Exponential Model for $h_0(t)$ . . . . .	106
4.1.4 Positive Stable Frailties . . . . .	112
4.1.5 A Bayesian Model for Institutional Effects . . . . .	118
4.1.6 Posterior Likelihood Methods . . . . .	126
4.1.7 Methods Based on Partial Likelihood . . . . .	131
4.2 Multiple Event and Panel Count Data . . . . .	134
4.3 Multilevel Multivariate Survival Data . . . . .	136
4.4 Bivariate Measures of Dependence . . . . .	147
Exercises . . . . .	148
<b>5 Cure Rate Models</b>	<b>155</b>
5.1 Introduction . . . . .	155
5.2 Parametric Cure Rate Model . . . . .	156

5.2.1	Models . . . . .	156
5.2.2	Prior and Posterior Distributions . . . . .	160
5.2.3	Posterior Computation . . . . .	163
5.3	Semiparametric Cure Rate Model . . . . .	171
5.4	An Alternative Semiparametric Cure Rate Model . . . . .	179
5.4.1	Prior Distributions . . . . .	180
5.5	Multivariate Cure Rate Models . . . . .	185
5.5.1	Models . . . . .	185
5.5.2	The Likelihood Function . . . . .	188
5.5.3	The Prior and Posterior Distributions . . . . .	190
5.5.4	Computational Implementation . . . . .	191
	Appendix . . . . .	199
	Exercises . . . . .	205
<b>6</b>	<b>Model Comparison</b>	<b>208</b>
6.1	Posterior Model Probabilities . . . . .	209
6.1.1	Variable Selection in the Cox Model . . . . .	210
6.1.2	Prior Distribution on the Model Space . . . . .	211
6.1.3	Computing Prior and Posterior Model Probabilities	212
6.2	Criterion-Based Methods . . . . .	219
6.2.1	The $L$ Measure . . . . .	220
6.2.2	The Calibration Distribution . . . . .	223
6.3	Conditional Predictive Ordinate . . . . .	227
6.4	Bayesian Model Averaging . . . . .	234
6.4.1	BMA for Variable Selection in the Cox Model . .	236
6.4.2	Identifying the Models in $\mathcal{A}'$ . . . . .	237
6.4.3	Assessment of Predictive Performance . . . . .	239
6.5	Bayesian Information Criterion . . . . .	246
6.5.1	Model Selection Using BIC . . . . .	249
6.5.2	Exponential Survival Model . . . . .	249
6.5.3	The Cox Proportional Hazards Model . . . . .	250
	Exercises . . . . .	254
<b>7</b>	<b>Joint Models for Longitudinal and Survival Data</b>	<b>262</b>
7.1	Introduction . . . . .	262
7.1.1	Joint Modeling in AIDS Studies . . . . .	263
7.1.2	Joint Modeling in Cancer Vaccine Trials . . . . .	263
7.1.3	Joint Modeling in Health-Related Quality of Life Studies . . . . .	264
7.2	Methods for Joint Modeling of Longitudinal and Survival Data . . . . .	265
7.2.1	Partial Likelihood Models . . . . .	265
7.2.2	Joint Likelihood Models . . . . .	267
7.2.3	Mixture Models . . . . .	273

7.3	Bayesian Methods for Joint Modeling of Longitudinal and Survival Data . . . . .	275
	Exercises . . . . .	287
<b>8</b>	<b>Missing Covariate Data</b>	<b>290</b>
8.1	Introduction . . . . .	290
8.2	The Cure Rate Model with Missing Covariate Data . . . . .	292
8.3	A General Class of Covariate Models . . . . .	293
8.4	The Prior and Posterior Distributions . . . . .	297
8.5	Model Checking . . . . .	301
	Appendix . . . . .	311
	Exercises . . . . .	317
<b>9</b>	<b>Design and Monitoring of Randomized Clinical Trials</b>	<b>320</b>
9.1	Group Sequential Log-Rank Tests for Survival Data . . . . .	320
9.2	Bayesian Approaches . . . . .	322
9.2.1	Range of Equivalence . . . . .	326
9.2.2	Prior Elicitation . . . . .	328
9.2.3	Predictions . . . . .	332
9.2.4	Checking Prior-Data Compatibility . . . . .	334
9.3	Bayesian Sample Size Determination . . . . .	336
9.4	Alternative Approaches to Sample Size Determination . . . . .	340
	Exercises . . . . .	349
<b>10</b>	<b>Other Topics</b>	<b>352</b>
10.1	Proportional Hazards Models Built from Monotone Functions . . . . .	352
10.1.1	Likelihood Specification . . . . .	354
10.1.2	Prior Specification . . . . .	356
10.1.3	Time-Dependent Covariates . . . . .	357
10.2	Accelerated Failure Time models . . . . .	359
10.2.1	MDP Prior for $\theta_i$ . . . . .	360
10.2.2	Polya Tree Prior for $\theta_i$ . . . . .	364
10.3	Bayesian Survival Analysis Using MARS . . . . .	373
10.3.1	The Bayesian Model . . . . .	374
10.3.2	Survival Analysis with Frailties . . . . .	379
10.4	Change Point Models . . . . .	381
10.4.1	Basic Assumptions and Model . . . . .	382
10.4.2	Extra Poisson Variation . . . . .	385
10.4.3	Lag Functions . . . . .	386
10.4.4	Recurrent Tumors . . . . .	388
10.4.5	Bayesian Inference . . . . .	389
10.5	The Poly-Weibull Model . . . . .	395
10.5.1	Likelihood and Priors . . . . .	396
10.5.2	Sampling the Posterior Distribution . . . . .	397

10.6	Flexible Hierarchical Survival Models . . . . .	398
10.6.1	Three Stages of the Hierarchical Model . . . . .	400
10.6.2	Implementation . . . . .	403
10.7	Bayesian Model Diagnostics . . . . .	413
10.7.1	Bayesian Latent Residuals . . . . .	413
10.7.2	Prequential Methods . . . . .	417
10.8	Future Research Topics . . . . .	429
	Appendix . . . . .	431
	Exercises . . . . .	433
	<b>List of Distributions</b>	<b>436</b>
	<b>References</b>	<b>438</b>
	<b>Author Index</b>	<b>467</b>
	<b>Subject Index</b>	<b>475</b>
